Business Model

We at ***Tritan Solutions*** understand that every client has unique needs and different ways are required to fulfill them. We offer several business models for this very reason. Each of the models has been designed to offer maximum benefits to clients. There are certain key factors, like, time to market, ownership of source code and quality of solution which vary in degree from customer to customer, based on which we adopt a model which suits our customer the most.

Below are the varieties of business models that ***Tritan Solutions*** offers to its customers to effectively fulfill their requirements, and eventually add value to the customer core business areas.

The Offshore Model

- This model enables clients to utilize the infrastructure and manpower of ***Tritan Solutions Pvt Ltd.*** in India to execute their projects.
- To meet its client's aggressive schedules, ***Tritan Solutions Pvt Ltd.*** presents the offshore outsourcing process that offers: –
 - Resource management, to meet demanding project deadlines.
 - Extensive project processes to meet different delivery needs of the customer.
 - Extraordinary cost benefits when compared to the cost of an equivalent onsite team.
- Additional benefits to the customer in terms of reduced infrastructure required, to seat, connect and manage an onsite team.

The Onsite Model

- ***Tritan Solutions Pvt. Ltd.*** provides its software consultants to carry out onsite services. These resources, as a part of the onsite project team would report to Project Manager responsible for the project. The onsite model can be a component of the offsite model, where in, ***Tritan Solutions Pvt. Ltd.*** will send its personnel to the client's side for implementation, testing and support of various projects.

The Offshore and Onsite Model

- ***Tritan Solutions*** could also carry entire programming work offshore and then undertake training, implementation and testing onsite at the customer site.

24 Hrs Virtual Development Cycle

- This is another useful concept, which works well under the onsite, offsite and offshore combination. It is useful to customers who are working against very tight deadlines and at the same time are unable to shore up their budget for getting the work done onsite.
